

Microsoft 365 Copilot Essentials

Duration

1.5 hours

Description

The Microsoft 365 Copilot Essentials Course is designed to equip participants with a comprehensive understanding of the Microsoft 365 Copilot and its capabilities. Through this course, attendees will delve into the concept of Generative AI and its seamless integration with OpenAI, gaining valuable insights into the world of Prompt Engineering and its critical role in maximizing AI effectiveness.

Participants will explore the practical applications of Copilot across various Microsoft 365 services, including Word, Excel, PowerPoint, Outlook, and Teams.

A significant focus is placed on crafting clear, specific, and impactful prompts and strategies for refining AI outputs and troubleshooting less-than-ideal responses. This hands-on course encourages practical exploration, allowing attendees to apply the concepts learned in real-world scenarios.

By the end of the course, participants will have a thorough understanding of Microsoft 365 Copilot's functionalities, be adept at constructing effective prompts, and have the skills to refine AI outputs for the best results.

Objectives

- Understand the concept and functionalities of Microsoft 365 Copilot.
- Learn about Generative AI and its integration with OpenAI.
- Explore Prompt Engineering and its importance in effective AI use.
- Discover Copilot's real-world applications across numerous services.
- Gain insights into Copilot integrations with Microsoft 365 applications like Word, Excel, PowerPoint, Outlook, Teams, etc.
- Master the art of constructing clear, specific, and compelling prompts.
- Develop strategies for refining outputs and troubleshooting suboptimal responses through iterative prompting.
- Engage in practical exploration to apply learned concepts.

Prerequisites

None

Training Materials

Students will review access to web-based courseware and a recording of the class session.

Software Requirements

None. If students can access Microsoft 365 and Microsoft Copilot 365, they may follow along with the live demonstrations. If students desire to explore Copilot 365 independently following the session, they need their licenses.

Outline

- What is Copilot?
 - Microsoft Copilot for Microsoft 365
 - Generative AI and OpenAI
 - Prompt Engineering
 - Real-World Stories of How Copilot Helps
 - Copilot Licensing
- Other Copilot Services
 - GitHub Copilot for Programmers
 - Microsoft Copilot for Bing and Windows
 - Microsoft Dynamics Copilot
- Copilot 365 Integrations
 - Documents: Microsoft Word, Excel, PowerPoint
 - Communication: Microsoft Outlook, Microsoft Teams
- Copilot 365 Chat Application
 - Copilot 365 User Experience
 - Web App Copilot 365
 - Desktop App Copilot 365
 - Chat History
 - Prompt Search
 - Improving Context with Documents, Contacts, and Communications
 - Web Content Plugin
 - Copilot Suggested Prompts
 - Copilot Lab
- Prompt Engineering

- What is a Prompt and a Completion/Suggestion/Response?
 - Techniques for constructing clear, specific, and effective prompts
 - Context, precision, and expected outcomes in prompt formulation
 - Refine Outputs with Iterative Prompting
 - Strategies for troubleshooting and improving suboptimal responses
- Practical Exploration
 - Generate content from existing content in Microsoft 365 documents
 - Improve the efficiency of searching and summarizing Outlook emails
 - Microsoft Teams Copilot Chat to Summarize Meetings
 - Create PowerPoint Presentations with Copilot
 - Other Examples
